

TravelAble by Smartvel

Accessible travel made simple

For over a decade, Smartvel has specialized in developing intelligent solutions that structure and integrate travel information into the traveler journey.

By managing global travel requirements and developing solutions like EntryDocs, we have helped airlines transform complex travel information into structured and contextualized.

Today, that same expertise is applied to a new challenge: **accessibility**: a challenge that is not lack of information but about how that information is structured, contextualized and delivered across the journey.

TravelAble is a new approach to integrate **accessibility** directly into the digital experience.

What travelers **actually** experience

To complement the structural analysis, we conducted research with travelers with accessibility needs, including surveys and in-depth interviews.

Airlines: operational reality

	Airline A	Airline B	Airline C	Airline D	Airline E
Route-level personalization	⊗	⊗	⊗	⊗	⊗
Unified airline and airport view	⊗	⊗	⊗	⊗	⊗
Mobility equipment contextualization	🗨	🗨	🗨	🗨	🗨
Integrated into booking flow	🗨	🗨	🗨	🗨	🗨
End-to-end journey guidance	⊗	🗨	⊗	⊗	🗨
 Fragmented  Not implemented					

Travelers with special needs

Choosing a flight is not just about time or price. It’s about understanding **whether the journey will actually work for them.**

- Will my wheelchair battery be accepted on this route?
- How do I request assistance correctly, and is it confirmed?
- What will happen at boarding?
- Where do I meet assistance at this specific airport?
- Will my equipment be returned at the arrival gate or elsewhere?

What travelers need is simple:

Clear expectations before booking

Tailored information to specific route & needs

Step by step understanding of the journey

This is **TravelAble**

travelAble transforms accessibility from fragmented information into a structured, guided journey. It brings together global airline and airport details to clearly explain what to expect at departure, in-flight and upon arrival.

Instead of static content, travelAble dynamically adapts information to each traveler's needs and context, connecting airline policies with real airport procedures.

With **TravelAble** travelers know exactly what will happen before they travel.

Inform

All the details on accessibility throughout the full journey

Personalize

Tailor results based on passenger's needs

Centralize

Unify and standardize airline and airport accessibility info

Simplify

Make travel planning easier and set clear expectations

One structured accessibility model

To scale accessibility across airline digital ecosystems, information needs more than visibility, it needs structure.

That means organizing accessibility data through a consistent model that connects:

airline policies → journey stage → airport procedures → passenger-specific needs → aircraft and equipment rules

This allows guidance to be delivered consistently across web, app and other digital touchpoints, with the flexibility to adapt by route, market and passenger need.

Built for scalability, **travelAble** expands easily across routes, markets, and experiences.

One clear, guided experience

Passenger profile & travel context

TravelAble understands the traveler and the journey in detail: route, airline, airports, type of mobility equipment, battery specifications, additional aids, and care conditions.

Personalized guidance across the journey

TravelAble delivers structured, step-by-step information before the flight, at the departure airport, during the flight, and upon arrival.

Clear actions and aligned expectations

Travelers receive clear instructions on what to request, when to do it, where to go, how boarding will take place and how and what assistance services to expect at each stage of the journey.

Key covered points

Booking assistance

Minimum notice period, link & other request methods

Mobility equipment

Accepted types, registration, & handling instructions

Airport meeting point

Where to meet assistance staff

Check-in & Security

Equipment check, labeling, & control procedures

Boarding

Transfer to aircraft wheelchair and seat

Disembarkation

Procedure & equipment handover

Aligning passenger experience with operational execution

When accessibility information isn't aligned, passengers arrive uncertain, and that uncertainty carries into operations, increasing support demand and complexity.

This creates an opportunity to shift from reactive resolution to coordinated, proactive journeys, with impact **across every team**.

Digital / Product

Clear, contextual accessibility embedded into the booking journey, reducing friction in assistance and SSR selection.

Customer Experience

Fewer repetitive queries and reduced pre-trip anxiety, as travelers arrive better informed

Operations

Fewer last-minute issues and stronger alignment with ground handling processes

ESG / Accessibility

Consistent, inclusive communication that supports leadership in accessibility

Accessibility information already exists across your ecosystem, how it's delivered will define the experience you provide.

TravelAble is designed to enable that shift, helping you move from fragmentation to coordination, and from uncertainty to clarity.
