WHY SMARTVEL

Understanding Travel Requirements

Travel requirements (visas, passport validity, health rules, transit conditions) are among the most searched topics in travel. Yet most platforms still leave customers to figure it out on their own, through the internet, llms, or government websites. The result: **anxiety, support calls, missed bookings and eroded trust.**

Smartvel EntryDocs closes that gap. **It provides structured, rule-based travel requirement data continuously monitored, human-validated and personalised** that can be embedded into any digital platform via API or white-label widget.

EntryDocs is a widget / API that enables airlines and travel platforms to inform passengers—dynamically and in a fully personalized way about all the documentation required to travel from any departure airport to any international destination.

The solution takes into account key variables that directly determine a passenger's actual ability to travel:

The combination of these variables creates multiple regulatory scenarios that cannot be accurately addressed through static content or generic responses. The value of the service lies not only in informing passengers, but in evaluating their travel eligibility based on constantly evolving immigration, health, and regulatory requirements.

HOW IT WORKS

01 / CONTENT & PERSONALISATION

How We Keep Requirements Accurate

Providing reliable travel requirements at scale requires more than access to information. It depends on a continuous process of monitoring, validation and structuring of regulatory content.

Data sources

- Official government & embassy websites
- Border and immigration authorities
- International health organisations
- Official visa platforms

Technology + Human Validation

- Automated web crawling detects regulatory changes in real time
- Real-time monitoring of regulatory changes
- Travel regulation experts validate and structure the data before delivery
- Experts review and structure every update

TRCS — Travel Requirements Content Team

- Specialised team interpreting complex regulations
- Translates legal complexity into clear, user-friendly instructions
- Additional QA ensures content is understandable, not just accurate

What EntryDocs covers:

- Visa & passport rules
- e-Visa application links
- Health & vaccination
- Insurance requirements
- Transit conditions

02 / USE CASES

Where Entrydocs Fits In The Customer Journey

EntryDocs can be integrated across multiple touchpoints of the travel experience, allowing platforms to provide consistent and reliable travel requirements at every stage of the journey.

From the moment travellers start planning their trip to the final stages before departure, requirements can be surfaced in context. Helping users make informed decisions and prepare with confidence.

Core Use Cases By Journey Stage

Before Booking

- Reduce friction and uncertainty
- Increase booking confidence

Fewer abandoned bookings

Post-Booking

- Provide reassurance at confirmation
- Reduce inbound support queries

Highest-value pre-departure touchpoint

Pre-Travel

- Ensure traveller readiness
- Avoid last-minute issues at boarding

Reduces no-shows and denied boarding

At Scale

- Consistent info across all channels
- Reduced operational cost

Scalable across all markets

Website & booking flow
Mobile applications
Chatbot / API
Pre-departure email

03 / BENEFITS

Business impacts of EntryDocs

EntryDocs is quick to implement and requires no operational effort – with Smartvel managing all content updates.

1. Service & Experience Upgrade

EntryDocs represents an upgrade of both solution and service quality.

- EntryDocs delivers a clear upgrade in both product capability and service quality across the organisation.
- Homogeneous messaging across the organization: EntryDocs ensures consistent and reliable information across all channels, including web, app, and call center.

- Improved NPS (Net promotion score): Clear, structured, and personalised documentation information reduces passenger uncertainty and friction, directly contributing to higher satisfaction and improved NPS.

20% NPS improvement on travel requirements for a Tier 1 airline

2. Operational Efficiency & Cost Reduction

One of the main drivers is a significant reduction in call center costs.

EntryDocs minimizes passenger doubts related to documentation requirements, reducing inbound calls and repetitive queries.

At the same time, EntryDocs significantly reduces call center volume by proactively answering the most frequent passenger questions related to travel documentation (visas, passports, vaccines, forms, etc.).

By providing traveller-specific and itinerary-specific requirements, EntryDocs:

- Reduces repetitive inbound calls
- Improves first-contact resolution
- Allows call center agents to focus on higher-value interactions

3. Revenue Enablement & Cross-Selling Opportunities

3.1 Insurance Upsell Potential

EntryDocs creates a strong opportunity to improve cross-selling of your own or, third party insurance upgrades, by presenting them in relevant moments during the documentation journey.

3.2 Visas Upsell Potential

EntryDocs allows you to offer eTA or eVisa management services directly within the passenger journey. This creates additional revenue opportunities while maintaining transparency and passenger trust by clearly presenting benefits and limitations.

22.18% (Airline A)

24.71% (Airline B)

4. Improved Digital Experience (Web & App)

- **Open web:** clearer, more reliable, and up-to-date travel documentation information, enabling confident self-service.
- **Mobile app:** personalized information tailored to each trip, itinerary, and passenger profile, taking into account nationality, residency, and route.

This level of personalisation reduces uncertainty and significantly improves the passenger journey before flying..

5. Industry Leadership & Innovation

EntryDocs helps position travel brands as a **leader in innovation** by solving one of the most critical traveller pain points with a modern, digital-first solution.

It represents a quick win in innovation: fast to deploy, highly visible across the customer journey, and requiring minimal internal effort.

6. Full Personalization

EntryDocs can be preloaded with itinerary data, allowing travel requirements to be automatically tailored to each trip:

- The full route (origin, destination and any stopovers)
- The traveller profile (available passenger data)
- Entry, transit and exit requirements for each location

This means travellers receive fully personalised documentation requirements without having to manually configure their trip.

By preloading itinerary data, travel companies can:

- Deliver highly relevant, personalised information from the first interaction
- Reduce traveller uncertainty well before departure
- Simplify the user journey while maintaining full accuracy

MORE TRAVELER SUPPORT

TravelAble — Accessibility Travel Information

TravelAble is Smartvel's upcoming solution for personalised accessibility information, helping travellers with reduced mobility, disabilities or specific needs navigate every stage of their journey with confidence.

Designed initially for airlines and cruises, TravelAble extends Smartvel's role as a full travel companion: ensuring no traveller is left without the guidance they need.

Before the trip

Accessibility info for destination airports, transport and accommodation

At the airport

Assistance services, accessible routes, boarding procedures

During the flight

Onboard accessibility features and crew assistance availability

Destination airport

Local mobility options, arrival procedures for PRM travellers

GET STARTED

Let's Talk

Smartvel's solutions are modular, easy to integrate and designed to be activated progressively — so you can start with one product and expand as you validate value. All solutions are available via API and white-label widget, with full technical documentation and dedicated Customer Success support throughout the process.

API

Full control over UX.
Integrate content directly
into your own design.

Widget

Ready-to-use, white-label.
Deploy in days with minimal
engineering effort.

Combined

Use APIs for core flows
and widgets for rapid
feature expansion.
